History

This message has been forwarded.

Hi Bob,

Thanks for providing me with the results of the latest investigations and a revision of the work plan described in your memo dated June 19, 2007.

I support your plan to conduct subsurface geophysical survey (Seismic refraction or/and electromagnetic) for more detailed investigation of the bedrock south-southeast of the subject site. Interpretation of the geophysical data will be based on Geoprobe/Waterloo profile techniques. Newly installed GW monitoring well(s) will provide better understanding of the plume.

As we discussed in our telephone conversation earlier today, the locations of the 3 proposed transects (profiles) should be better evaluated. It seems that the 3rd line is far away (1500 ft S-W of line 2). Also some of the profiles may be too short (300 ft) consider the depth to the bedrock (more then 40 ft). It is good for interpretation of geophysical data along parallel lines to have 1-2 connectors (intersection profiles) to identify same events/features observed on each line .

I am sure, you will discuss all of that with a geophysical team/subcontractor being involved in the investigations.

Regards, Gene

Subject: Former IntelliData

Gene, here is a modification of our previously proposed work plan for the off-site work at the former IntelliData. Let me know if you have any concerns.

A second e-mail will follow with graphical description of proposed geophysical survey layout (large file)
